

How to Change the Default path of Jenkins

1. **Stop Jenkins:**

```
sudo systemctl stop jenkins
```

2. **Edit Jenkins configuration file:** Open the Jenkins service configuration file:

```
sudo vi /etc/default/jenkins
```

3. **Change the `JENKINS_HOME` path:** Look for the line that defines `JENKINS_HOME` and modify it to the desired directory. For example:

```
JENKINS_HOME="/new/path/to/jenkins_home"
```

4. **Create the new directory (if it doesn't exist yet):**

```
sudo mkdir -p /new/path/to/jenkins_home
```

5. **Ensure proper permissions:** Ensure the Jenkins user (usually `jenkins`) has ownership of the new directory:

```
sudo chown -R jenkins:jenkins /new/path/to/jenkins_home
```

6. **Restart Jenkins:**

```
sudo systemctl start jenkins
```
